

Tehag

Diesel emissions management

Thanks to our cutting-edge technologies, we are able to comply with current emissions regulations, as well as regulations expected to become more restrictive in the years to come. With TEHAG technologies, your vehicle is on the safe side, both now and in the future. Either the ON-Road or OFF-Road application solutions are perfect for retrofit or new vehicles.

Tehag philosophy

A diesel engine is still the most common and efficient engine in the world. Worldwide, emissions regulations are becoming increasingly more restrictive in pursuit of a healthier and more sustainable environment. TEHAG supports you by retrofitting any diesel driven application with our future-oriented emissions technologies and helps clients keep their valued equipment up to date.

Our engineers are emissions experts, with extensive knowledge and more than 15 years of experience in the field. We offer competent support in selecting the right solution for any application.

Services

We provide a competent consultancy service through our experienced engineers from the very start of each project, to make sure we offer the appropriate and best solution for your specific application. This concerns not only the design of the filter system, but we also inform our clients about different regulations and laws in the countries in which we are active. Over the years we helped many clients with a huge variety of On-Road and Off-Road applications. Our know-how helps you to find the best available technology.

Our product portfolio consists of oxidation catalysts that reduce carbon monoxide and hydrocarbon in exhaust gas, as well as the CWF-DPF System to virtually eliminate all diesel particulate matter. We can also offer our T-blue SCR technology to decrease NOx in a highly efficient manner. All of our exhaust after-treatment technologies can be combined and are interchangeable.

www.tehag.com

Using the best design available, we achieve emissions reductions beyond recent regulations and the limits of the EURO 6 Standard, Stage 4 and Level 3+.

Excellent workmanship and only the best and most durable materials guarantee a properly functioning and long-lasting solution. We feel strongly about building and maintaining long-term customer relationships. We offer regular service and maintenance for all our products through our service teams.

Team

The Tehag Team is well established in Europe, with two main corporations: the Tehag Engineering AG in Switzerland and the Tehag Deutschland GmbH in Germany. Together with our branch in France and representatives in Scandinavia and Austria, we offer our service and product portfolio throughout Europe. Tehag INC has enabled us to enter a new, large market in the U.S.

Our history

- 1991 Foundation of Tehag Engineering AG as an association for environmental technology patents in Switzerland.
- 1994 Start of operative business by installing environmental technology systems.
- 1995 Start-up of first SCR-System on a stationary engine.
- 1997 Start of business with diesel particulate filter on a passive regeneration basis.
- 2001 TEHAG opens its own manufacturing site in Switzerland.
- 2004 Foundation of Tehag BV in the Netherlands.
- 2006 Establishment of business in Germany and expansion of manufacturing capacity in Switzerland.
- 2007 Establishment of Tehag Germany GmbH and creation of second manufacturing site in the Netherlands.
- 2008 Expansion of manufacturing capacity in the Netherlands.
